DETAILED ACTION

Allowable Subject Matter

1. Claims 1-11 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The prior art of record fails to teach or suggest, alone or in a combination, among other things, at least a signal compensation circuit and its method as a whole, the combination of elements and features, which includes a low-speed compensation circuit for detecting changes in the direct-current component of a amplified signal and charging and discharging a capacitor in accordance with the changes', a high-speed compensation circuit for comparing the amplified signal with an allowable amplitude range and charging and discharging the capacitor, when the amplitude of the amplified signal goes outside the allowable amplitude range; and a threshold adjustment circuit for adjusting the allowable amplitude range in response to detected changes by the threshold adjustment circuit as recited in the claim.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Murtojarvi (US 6,668,162) describe an apparatus and its method of compensating the drift of a detector and generating a control signal to control the drifting power.

Hansen (US 5,369,470) describes a receiver with weak signal detector, adjacent channel detector and adjacent channel takeover detector in a detector module.

Day (US 4,571,547) describes an amplifier responsive pulse rate detector with thresholds.

Ericksen et al. (US 4,535,294) describes an amplitude detector with variable threshold comparator.

Fiumani (US 4,272,845) describes an amplitude demodulator with peak detector comprising capacitors.
